PE tarpaulin: Reliable protection and versatile options

PE tarpaulin (polyethylene tarpon) is a lightweight, durable and versatile fabric with strong protective performance, widely used in outdoor activities, industrial sites, agriculture and other fields. It is mainly made of high-density polyethylene fiber by special process, which has excellent characteristics of waterproof, UV proof, tensile and wear resistance. PE tarpaulin is not only light and easy to carry, but also economical in price, which is very suitable for long-term use. Its UV resistance and waterproof function enable it to maintain good performance in a variety of harsh environments. Whether it is daily life, industrial use or agricultural operations, PE tarpaulin is an economical, reliable and environmentally friendly choice.

Application:

Outdoor shade and rain protection: PE tarpaulin is often used to build sunshade or rainproof facilities in open-air markets, parking sheds, and open-air activities. Whether it is a daily stall or a large event, it can provide you with effective protection.

Storage protection:

In the storage industry, PE tarpaulin can be used as a protective cover to cover items, avoid moisture, rain or dust, and keep goods clean and safe.

Agricultural use:

In agriculture, PE tarpaulin can be used as greenhouses and field coverings to help regulate temperature, extend the growing season of crops, and protect

PE tarpaulin -Factory wholesale

The weight of PE tarpaulin is usually classified according to the thickness and density of its fabric, and the choice of weight directly affects its strength, durability and scope of application.

Light PE tarpaulin (80g/m² –150g /m²): It is suitable for lightweight protection needs, such as temporary shade, rain gear, advertising cloth, etc. It is soft and easy to fold, making them suitable for short-term use.

Middle-sized PE tarpaulin (150g/m² 200g /m²): With high tensile resistance and wear resistance, it is suitable for long-term open storage of goods or as a simple cover, such as open-air markets, open-air parking sheds, etc.

Heavy PE tarpaulin (200g/m² 500g /m²): It is thick and durable, and suitable for industrial, agricultural and construction industries, such as large-scale storage, wind and rain shelter, and even for vehicle cover and other occasions requiring high strength protection.

Heavier tarpaulins are suitable for long-term, intense environments, while lighter tarpaulins are suitable for short-term or temporary protection.

Professional sales team, over 15 years experience in producing Inflatable exhibition booth tarp. Over 10 years OEM&ODM finished product experience, we are a factory produces pvc tarpaulin in Haining. The greatest feature of our Inflatable exhibition booth tarp is stable and durable quality.

Teamwork

Application

Agriculture: It can be used as a greenhouse cover or field protective cloth to help regulate temperature, humidity and protect crops from wind and rain.

Construction industry: It acts as a shielding cloth on the construction site to prevent dust leakage and protect the building from the weather.

Outdoor activities: For example, outdoor markets, camping, outdoor advertising, etc., used for shading, wind or rain, to provide stable protection.

Logistics and transportation: PE tarpaulins are often used to cover goods during storage and transportation to avoid rain or pollution.

GSTARP

Features:

High waterproofness: PE tarpaulin has excellent waterproof performance, which can effectively block rain and protect items from moisture.

UV resistance: Special UV anti-UV treatment allows it to be exposed to the sun for a long time, and it is not easy to aging and fade.

High tensile strength: PE tarpaulin has strong tensile resistance and can withstand greater pressure and weight.

Light weight: Compared with other materials, PE tarpaulin is relatively light and easy to handle and store.

Strong wind resistance: PE tarpaulin in the wind environment, can remain stable, not easy to be blown up.

Affordable: As a widely used economic protective cloth, PE tarpaulin material is at a low cost, with high cost performance.

Environmental protection: PE material can be recycled, in line with environmental requirements, and is a sustainable use of products.

Fireproofing: Some types of PE tarpaulin after special treatment can have a certain fire performance, suitable for the occasion of high fire risk.

Diverse colors: PE tarpaulin can be made in different colors according to need, such as blue, green, gray, etc., to meet the visual needs of different occasions.

Corrosion resistance: PE tarpaulin can withstand the erosion of chemicals, oil and pollutants, and are suitable for a variety of environments.

Easy to process: PE tarpaulin can be customized through heat sealing, suturing and other processes to adapt to the needs of different sizes and shapes.

Durability: Due to its strong UV resistance, wear resistance and water resistance, PE tarpaulin can be used for many years in most harsh environments.
